LAB PROGRAM 1 :

Develop a Java program that prints all real solutions to the quadratic equation ax2 +bx+c = 0. Read in a, b, c and use the quadratic formula. If the discriminate b2-4ac is negative, display a message stating that there are no real solutions.

```java
import java.util.Scanner;

class quadratic
{
  public static void main(String args[])
  {
    double a, b, c;
    double r1, r2;
    double determinant;
    Scanner input = new Scanner(System.in);
    System.out.println("Enter the values of a, b, c : ");
    a = input.nextDouble();
    b = input.nextDouble();
    c = input.nextDouble();
    determinant = (b*b)-(4*a*c);
    if(determinant > 0)
    {
      r1 = (-b + Math.sqrt(determinant))/(2*a);
      r2 = (-b - Math.sqrt(determinant))/(2*a);
      System.out.println("Real roots of the quadratic equation are : " + r1 + " and " + r2 );
    }
    else if(determinant == 0)
    {
      r1 = (-b + Math.sqrt(determinant))/(2*a);
      System.out.println("They have equal real roots : " + r1 + " and " + r1 );
```

```
    }

    else

    {

    System.out.println("There are no real solutions.");

    }

  }

}
```

LAB PROGRAM 2 :

Develop a Java program to create a class Student with members usn, name, an array credits and an array marks. Include methods to accept and display details and a method to calculate SGPA of a student.

```java
import java.util.Scanner;

class Student
{
  String name;
  String usn;
  int marks[] = new int[5];
  int credits[] = new int[5];
  int i, n;
  int grade=0;
  double total=0;
  void get_data()
  {
    Scanner in = new Scanner(System.in);
    System.out.println("Enter Student Name : ");
    name = in.next();
    System.out.println("Enter Student USN : ");
    usn = in.next();
    System.out.println("Enter the number of subjects : ");
    n = in.nextInt();
    System.out.println("Enter subject credits and subject marks : ");
    for(i=0;i<n;i++)
    {
      System.out.println("Credits for subject " + (i+1) + " : ");
      credits[i] = in.nextInt();
      System.out.println("Marks in subject " + (i+1) + " : ");
```

```java
      marks[i] = in.nextInt();
  }
}
void calculate_sgpa()
{
  for(i=0;i<n;i++)
  {
    if(marks[i] >= 90 && marks[i] <=100)
      grade=10;
    else if(marks[i] >= 80 && marks[i] < 90)
      grade=9;
    else if(marks[i] >= 70 && marks[i] < 80)
      grade=8;
    else if(marks[i] >= 60 && marks[i] < 70)
      grade=7;
    else if(marks[i] >= 50 && marks[i] < 60)
      grade=6;
    else if(marks[i] >= 40 && marks[i] < 50)
      grade=5;
    else if(marks[i] >= 0 && marks[i] < 40)
      grade=0;
    else
      System.out.println("Invalid marks entered");
    total = total + (grade*credits[i]);
  }
  total = total/20;
  System.out.println("SGPA = " + total);
}
```

```java
void stud_details()
{
  System.out.println("Name : " +name);
  System.out.println("USN : " + usn);
  System.out.println("Marks and Credits of all subjects : ");
  for(i=0;i<n;i++)
  {
    System.out.println("Subject " + (i+1) + " : ");
    System.out.println("Marks : " + marks[i]);
    System.out.println("Credits : " + credits[i]);
  }
  calculate_sgpa();
}
public static void main(String args[])
{
  Student obj = new Student();
  obj.get_data();
  obj.calculate_sgpa();
  obj.stud_details();
}
}
```

```
Command Prompt

C:\Users\SAKSHI>cd C:\Users\SAKSHI\JA\

C:\Users\SAKSHI\JA>javac Student.java

C:\Users\SAKSHI\JA>java Student
Enter Student Name :
